

Dear Primary Care Prescriber,

Glycopyrronium Bromide (Sialanar®) Prescribing Information

There is a new formulation of glycopyrronium bromide liquid (Sialanar®) on the formulary which is labelled in terms of glycopyrronium content on the main label.

This preparation contains glycopyrronium **bromide**, but the labelling is expressed differently.

The label will read as: 1mL contains 320micrograms glycopyrronium (equivalent to 400micrograms glycopyrronium **bromide**)

Please be aware of the potential for dosing error when prescribing this new solution (Sialanar®). The strength of Sialanar® is expressed differently to other liquid preparations of glycopyrronium bromide on the bottle and GP prescribing systems.

At Barts Health we recommend to express the dose as the salt, glycopyrronium bromide.

E.g. dose of 400micrograms glycopyrronium bromide = 1mL volume of Sialanar® liquid

Please note, this drug is for initiation by paediatricians at the Trust, followed by continuation in Primary Care.
