This winter holiday check your children's vaccinations are up to date

If you or your children have missed any vaccinations, do not delay contacting your GP to catch up and keep our community safe and protected from serious diseases.

“

Vaccination against diseases like measles, pertussis and polio is both safe and incredibly effective. Due to a recent local increase of these vaccine-preventable diseases, it's important to stress that timely vaccination can help protect both children, and the wider community at the same time.

Dr Tamara Djuretic, Joint Director of Public Health Barnet and the Royal Free Group.

Vaccines protect
you, your family
and our
community
